

Buffalo Turbine Parts Bulletin

It has been brought to our attention that a few of the 12-gallon fuel tanks (part # 4137) on the Model BT-MEGA and our Sprayer/Granular units have experienced a condition with fuel getting into the vent line.

To prevent fuel from getting into the vent line we are providing the check valve fitting to be installed on the fuel tank.

Step #1: Remove fuel line clamp and fuel from vent fitting

Step #2: Remove vent fitting from fuel tank

Step #3: Install Aluminum fitting into fuel tank first. Then install brass check valve.

Step # 4: Install fuel line and clamp onto vent elbow fitting.
