

AQUATIC SERVICES

GIVE **WATER** LIFE

GIVE WATER LIFE

A healthy body of water is one that can be appreciated and enjoyed. Clarke Aquatic Services uses years of experience and expert techniques to manage water resources.

YOUR WATER BODY IS UNIQUE. SO IS OUR MANAGEMENT STRATEGY.

PREVENTIVE AND PRESCRIPTIVE
FRESH WATER MANAGEMENT

Healthy, native ecosystems are active and ever-changing. Lakes and ponds have unique characteristics and require different types of maintenance to remain healthy. Clarke Aquatic Services focuses on accurate diagnoses and remarkably precise treatments to ensure long-term water wellness.

MANAGE WATER RIGHT

The health of our water resources is linked to our own well-being. Treating them with a sense of long-term environmental responsibility is not only the right thing to do. It's a matter of public health.

FOR THE LOVE OF COMMUNITY

Clarke works to protect this relationship between water and people by using pinpoint methods that are backed by science and managed carefully. This approach ensures your community is more livable, comfortable and, most of all, safe.

WORKING WITH NATURE

Every water body is unique. From constructed ponds to lakes, the particular blend of setting, shoreline and surrounding plant life reflects its functional purpose and is part of the charm.

That's where Clarke comes in. If a water body needs a helping hand to recreate its original state of equilibrium, or to continue to serve its purpose, we take a prescriptive approach. Managing the quality of both surface water and groundwater is vital for sustaining aquatic ecosystems and protecting the diversity of our waterways.

APPLYING REGIONAL EXPERIENCE

It matters where water is. Our work across different regions in the U.S. gives us a rich understanding of all the factors that can affect water. Whether a large glacial lake in the upper Midwest, a constructed system of containment ponds in Florida or the pocketed waters of the mid-Atlantic, we have first-hand experience in managing them.

We always start by looking at the water body and understanding the aquatic plant populations. But in many cases, we must also consider the surrounding watershed, soil types, land use and discharge points when building a long-term management plan.

OFFERINGS AND SERVICES

Whether you are responsible for stormwater ponds in a planned community, own property on a lake or have a private pond, Clarke has experience designing and delivering effective management programs that deliver sustainable water wellness and protect and enhance aquatic ecosystems.

Across the U.S., our aquatic service capabilities for lakes, ponds and waterways include:

- Aeration and fountain solutions
- Algae control, including Harmful Algae Blooms (HABs)
- Aquatic plant management
- Fish stocking
- Invasive species management
- Lake management planning
- Littoral plantings and shelf management
- Natural preserve maintenance
- Nutrient mitigation
- Stormwater system management
- Survey and mapping
- Water quality monitoring and management
- Watershed planning
- Wetlands restoration

CONSERVE[®]

A TAILORED SERVICE FOR LARGE LAKES

Conserve is a precision application system for aquatic plant management. Designed by and available exclusively through Clarke, Conserve puts an end to over- or under-treatment. The result? The right product, at the right rate, is put right where it is needed in the water column to restore water body health with the least environmental impact possible.

Conserve applications begin with advanced sonar mapping to understand the mix of surface and underwater vegetation in your water body. Our experienced and licensed aquatic technicians select product and rate based on plant species and density. During the metered application, all data is captured in real time for integration with pre-and post-mapping and to satisfy all your reporting needs, including NPDES.

DO IT RIGHT. DO IT NOW.

Every body of water in your community is an asset. Maintaining their health and functionality protects your community from flooding and downstream pollution, elevates property values and helps foster an appreciation for the natural environment.

If you would like us to assess your water bodies and provide options that will work best for you and your budget, contact your local Clarke Aquatic Services professional for more information. It will give you peace of mind today and for years to come.
